PROFESSIONAL SUMMARY

Software Development Engineer with strong foundation in Computer Science, Data Structures, Algorithms, Algorithm Design, Complexity Analysis, and Distributed Systems. Experienced at PayPal developing cloud-native applications, integrating enterprise systems, building scalable backend services using Java and Python.

EDUCATION

Vellore Institute of Technology (Best Outgoing Student, Chancellor's Gold Medalist) 2022 - 2026

Bachelor of Technology, Computer Science and Engineering (AI & ML)

CGPA: 9.82/10.00

EXPERIENCE

PayPal, Software Engineer Intern

May 2025 - August 2025

- Led modernization of 10+ business-critical workforce management processes by migrating legacy database-driven batch applications into scalable Spring Boot microservices, improving maintainability and operational reliability.
- Designed and developed a full-stack internal application using Next.js, Spring Boot, REST APIs, OAuth 2.0, and SSO, reducing manual operational effort by 50-60% and improving internal workflow efficiency.
- Engineered a voice-enabled AI assistant for PayPal, accelerating information retrieval and reducing navigation effort.
- Integrated 10+ internal and third-party services through standardized APIs and monitoring pipelines, improving operational visibility and issue resolution.
- Collaborated with product owners and cross-functional stakeholders in an Agile environment, participating in sprint planning, code reviews, testing, production debugging, and iterative software delivery.

TECHNICAL SKILLS

Languages:	Java (OOP, DSA), Python, C, C++, Oracle SQL
Cloud & DevOps:	AWS, Docker, Kubernetes, GitHub Actions, CI/CD
Backend:	Spring Boot, SOAP, REST APIs, Microservices, WebSockets, OAuth 2.0, JWT Auth
Distributed Systems:	Apache Kafka, Event-Driven Architecture, Redis Caching, Message Queues
AI & ML:	PyTorch, Neural Networks, LLMs, RAG, MCP, Explainable Artificial Intelligence

PROJECTS

PingMe: Scalable Real-Time Communication Platform

[GitHub](#) | [Live Demo](#)

Technologies: Java, Spring Boot, JPA, WebSockets, OAuth 2.0, JWT, AWS, NGINX, GitHub Actions, Grafana, Next.js

- Architected and implemented a cloud-native distributed application using Spring Boot, PostgreSQL, AWS, and WebSockets, supporting 800 concurrent users and 500+ requests/sec on a 1GB AWS t3g.micro instance.
- Optimized PostgreSQL access using Hibernate, JPQL, Entity Graphs, and Keyset Pagination, eliminating N+1 queries and reducing deep-scroll retrieval complexity from O(N) to O(1).
- Secured REST APIs and STOMP WebSocket endpoints using Spring Security, Google and GitHub OAuth 2.0, and JWT-based stateless authentication and authorization.
- Implemented DevOps practices through GitHub Actions CI/CD, enabling automated zero-downtime deployments, and integrated OpenTelemetry, Micrometer, and Grafana Cloud for production observability, and incident prevention.
- Defined database schemas, API contracts, and deployment architecture following microservice design principles.
- Developed and integrated a seamless Next.js frontend with Server-Side Rendering, with Google Lighthouse score of 97.

Privacy-Preserving Face Forgery Detection using Federated Learning

[GitHub](#)

Technologies: Python, PyTorch, Vision Transformers, Flower Framework, Federated Learning

- Developed a privacy-preserving federated learning framework across distributed nodes without sharing private data.
- Designed dual-stream Vision Transformer architecture with spatial and frequency-domain features for robust detection.
- Achieved 95.12% accuracy and 98.43% AUC on FaceForensics++, outperforming multiple baseline approaches.

ACHIEVEMENTS AND CERTIFICATIONS

- LeetCode:** Solved 1000+ problems using Algorithm Design and Complexity Analysis (Knight, Top 4.4%).
- Nova Code Challenge by 9am Careers (Runner Up):** CP challenge among 500+ students of 2025-2027 graduates.
- AWS Academy Graduate - (Amazon Web Services) AWS Academy Cloud Architect:** hands-on experience with cloud-native architectures, distributed computing, and fault-tolerant, scalable services.
