PROFESSIONAL SUMMARY

Software Engineer with experience at PayPal building scalable Spring Boot microservices, REST APIs, and cloud-native backend applications on AWS. Proficient in distributed systems, database design, and Data Structures & Algorithms, with a strong track record of developing production-grade software in agile environments.

EDUCATION

Vellore Institute of Technology (Best Outgoing Student, Chancellor's Gold Medalist) CGPA: 9.80/10.00

Bachelor of Technology, Computer Science and Engineering (AI & ML)

2022 - 2026

EXPERIENCE

PayPal, Software Engineer Intern

May 2025 - August 2025

- Migrated 10+ database-driven batch jobs into scalable Spring Boot microservices, implementing unit testing and secure coding practices to improve maintainability and reliability.
- Developed a full-stack internal platform using Next.js, Spring Boot, REST APIs, and OAuth 2.0 authentication, reducing manual operational effort by 50-60%.
- Engineered a voice-enabled AI assistant for PayPal Android, accelerating information retrieval and reducing navigation effort through conversational interactions.
- Integrated 10+ Model Context Protocol (MCP) tools with centralized monitoring and logging, improving operational visibility and production issue resolution.
- Collaborated in Agile/Scrum development cycles with code reviews, CI/CD pipelines, and production debugging.

TECHNICAL SKILLS

Languages:	Java (OOP, DSA, Spring Framework), Python, C, C++, SQL
Backend:	Spring Boot, REST APIs, Microservices, WebSockets, OAuth 2.0, JWT Auth, JUnit
Databases:	PostgreSQL, MySQL, Redis
Cloud & DevOps:	AWS, Docker, Kubernetes, GitHub Actions, CI/CD
Distributed Systems:	Apache Kafka, Event-Driven Architecture, Caching, Message Queues
AI & ML:	PyTorch, Neural Networks, LLMs, RAG, MCP, Explainable Artificial Intelligence

PROJECTS

Real-Time Distributed Messaging Platform

[GitHub](#)

Technologies: Java, Spring Boot, Kafka, Redis, PostgreSQL, WebSockets, Docker, AWS, Next.js

[Live Demo](#)

- Architected and deployed a scalable real-time messaging platform using microservice architecture and distributed system design principles, supporting one-to-one and group communication.
- Designed event-driven messaging pipeline using Apache Kafka for asynchronous processing, and horizontal scalability.
- Implemented JWT authentication, role-based access control, typing indicators, online presence tracking, read receipts, and message acknowledgements.
- Leveraged Redis caching and session management to reduce message retrieval latency by 70%.
- Containerized services with Docker and automated CI/CD pipelines using GitHub Actions, enabling streamlined deployments to AWS and achieving 99.9% uptime during load testing.

Privacy-Preserving Face Forgery Detection using Federated Learning

[GitHub](#)

Technologies: Python, PyTorch, Vision Transformers, Flower Framework, Federated Learning

- Developed privacy preserving federated learning framework across distributed nodes without sharing private data.
- Designed dual-stream Vision Transformer architecture with spatial and frequency-domain features for robust detection.
- Achieved 95.12% accuracy and 98.43% AUC on FaceForensics++, outperforming multiple baseline approaches.
- Validated performance on non-IID and real-world datasets while maintaining data privacy and scalability.

ACHIEVEMENTS AND CERTIFICATIONS

- [Data Structures and Algorithms \(LeetCode\)](#): Solved 1000+ problems, Achieved Knight badge (Contests top 4.4%).
- [Nova Code Challenge by 9am Careers \(Runner Up\)](#): CP challenge among 500+ students of 2025-2027 graduates.
- [AWS Academy Graduate - \(Amazon Web Services\) AWS Academy Cloud Architecting](#): hands-on experience with cloud-native architectures, distributed computing, and fault-tolerant, scalable services.
